PROG101 Assignment 1: Student Attendance and Performance Management System

Course: PROG101, Principles of Programming Logic and Design

About the Project

This repository contains the pseudocode design for a Student Attendance and Performance Management System. The system helps a lecturer register students, mark attendance, record scores, and generate a performance report that flags students who need support.

What the System Does

1. **Register students** (up to 80 per class, no duplicate IDs)
2. **Mark attendance** (P for Present, A for Absent, with input validation)

3. **Record scores** (0 to 100, with input validation)
4. **Generate a report** showing attendance percentage, average score, grade and risk status

Key Rules

Rule	Value
Pass mark	50
Minimum attendance	75%
Maximum score	100
Maximum students	80

Grading scale: A (80+), B (70-79), C (60-69), D (50-59), F (below 50)

Risk status:

- **HIGH RISK**: attendance below 75% and average below 50
- **AT RISK**: attendance below 75% or average below 50
- **GOOD STANDING**: meets both requirements

Files

File	Description
`pseudocode.md`	Full pseudocode: constants, variables, main module, sub-modules and functions
